## WHERE DOES CARBON MONOXIDE COME FROM?

### POTENTIAL SOURCES OF CO

There are many potential sources of CO in your home that you and your family use every day. When operating properly the trace amounts of CO produced are typically not dangerous, and are vented safely outside your home.

Problems arise when something goes wrong (an appliance malfunctions, vents clog, debris blocks a chimney or flue, exhaust seeps into your home from the garage). All of these problems could increase the CO to dangerous levels.

**“Carbon Monoxide is the leading cause of fatal poisonings in North America...”**
